Digital Talent Management Platform – UX Case Study

NALINKUMAR VN **UI/UX DESIGNER**

Objective

The objective of this project is to design a **complete end-to-end user experience for a Digital Talent Management System** that helps organizations manage recruitment, employee development, and performance tracking efficiently.This platform aims to improve the **overall experience of HR teams, recruiters, and employees** by providing a centralized system that simplifies talent acquisition and career management.

Focus Areas

The project focuses on the following UX design stages:

• **User Research** – Understanding user needs and challenges
• **Wireframing** – Creating the basic structure of the platform
• **UI Design** – Designing the visual interface
• **Usability** – Ensuring the platform is easy to use
• **Documentation** – Recording the UX design process

Sprint 1 – Research & UX Strategy

Sprint 1 focuses on **understanding the users, their needs, and the challenges in existing HR systems**. The goal of this stage is to gather insights and create a **strong foundation for designing a user-friendly and effective talent management platform**.

1. Define Target Users

The first step is to identify the **main users of the platform**.

Primary Users – HR Managers / Recruiters

HR professionals use the platform to **manage recruitment, employee records, and performance tracking**.

Key Responsibilities

- Posting job openings
- Screening candidates
- Managing employee data
- Conducting performance reviews

User Needs

- Faster recruitment process
- Easy candidate management
- Centralized employee information
- Better performance insights

Secondary Users – Employees / Job Applicants

Employees and candidates use the platform to **apply for jobs and manage their career development**.

Key Responsibilities

- Apply for job positions
- Update profile and resume
- Track performance and growth

User Needs

- Simple job application process
- Clear career growth visibility
- Access to learning resources
- Transparent feedback from managers

2. User Personas

User personas help understand the **needs, goals, and challenges of key users** of the platform.

Persona 1 – Rachel (HR Recruiter)
Age: 34 | **Experience:** 8 Years in Recruitment

Goals

- Hire the right candidates faster
- Manage recruitment efficiently

Challenges

- Manual resume filtering
- Managing candidate data across different tools

Tech Skills: Advanced – Experienced with HR platforms.

Persona 2 – Eric (Employee)
Age: 27 | **Role:** Software Developer

Goals

- Monitor career growth
- Improve skills through training

Challenges

- Limited visibility of career progress
- Difficulty finding learning resources

Tech Skills: Good – Comfortable using digital systems.

3. Problem Statement

Many organizations manage recruitment and employee data using **different systems**, which makes the process **slow, complex, and difficult to manage**.There is a need for a **centralized digital platform** that simplifies hiring, manages employee information efficiently, and supports career growth.

4. User Journey Map

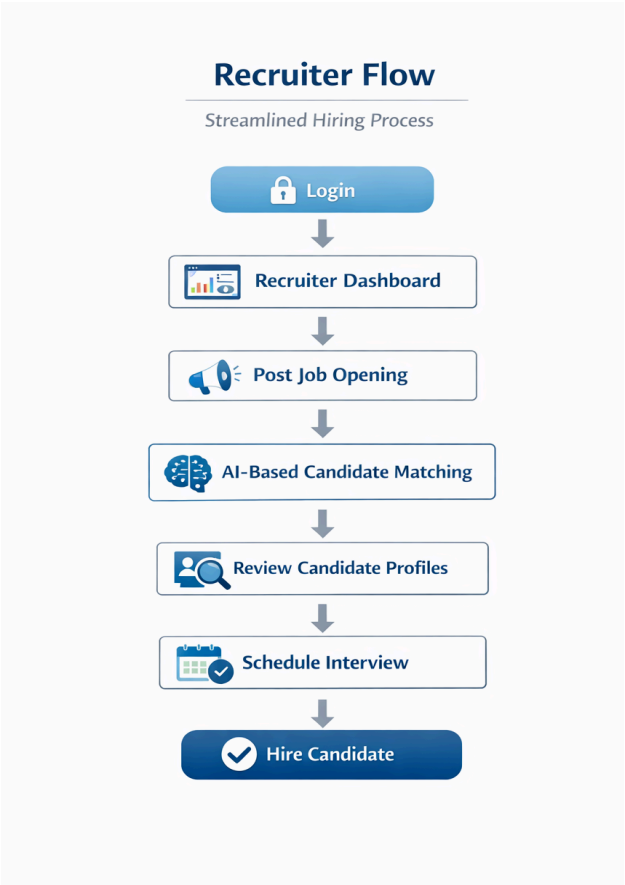
A **User Journey Map** shows the steps a job applicant follows during the hiring process and the challenges faced along the way. The journey begins when the applicant searches for suitable job opportunities and submits their resume and application details. After applying, the candidate waits for the recruiter's screening and response. If shortlisted, the applicant attends interview rounds and finally receives the hiring decision or job offer.

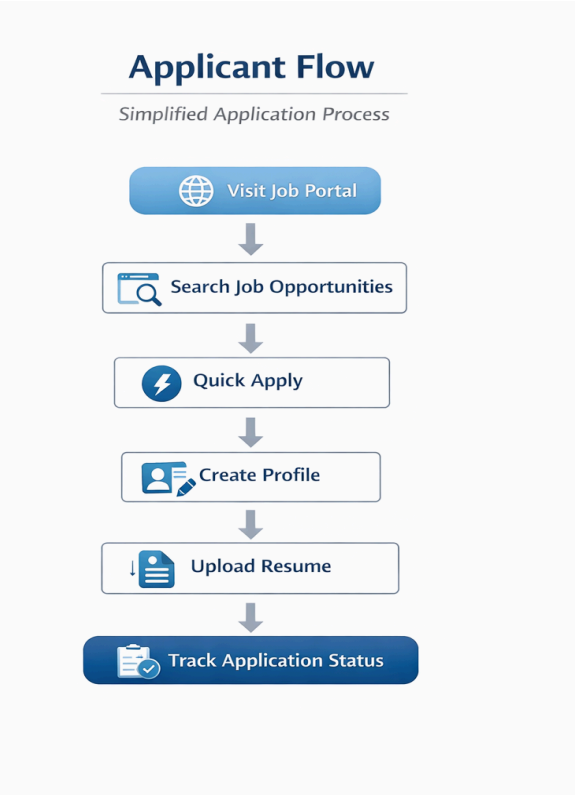
Journey Flow Map

Job Search → Application Submission → Recruiter Screening → Interview Process → Hiring Decision

Main Challenges: Slow hiring process, limited updates on application status, and difficulty finding suitable job opportunities.

5.User Flow Diagram – Proposed System





6. Research Summary

Sprint 1 research identified several key issues in current HR systems. The recruitment process is often slow, candidate data is scattered across different systems, and employees lack clear visibility of their career growth. In addition, HR teams require better tools to manage talent efficiently. These insights will guide the next stage of the project, which focuses on Wireframing and UI Design.

7.Conclusion

Sprint 1 established a **strong user-centered foundation** for the Digital Talent Management Platform by identifying user needs, problems, and workflows.These insights will guide the **next stage of the project, which focuses on creating wireframes and UI designs**.
